PROJECT REPORT

Name – Varun Vaish

Registration no. – 25BAI11368

TASK-1 (PRESENTATION)

For this task, I used Canva to design a digital literacy awareness infographic. Canva was chosen because it is easy to use and provides a variety of templates, icons, and design elements that help create visually appealing content.

My infographic focuses on key aspects of digital literacy, including its definition, useful digital tools for students, safe internet practices, and email etiquette. I used simple language and bullet points to make the information easy to understand. Icons and color coding were used to improve visual clarity and engagement.

The design highlights the importance of digital literacy in modern education, emphasizing how it helps students learn efficiently, communicate professionally, and stay safe online.

One challenge I faced was selecting the right amount of information to include without overcrowding the infographic. However, this helped me understand the importance of concise communication and effective visual design. Overall, this task improved my creativity and awareness of essential digital skills.

TASK-2 (PORTFOLIO)

For this task, I created and updated profiles on GitHub, LinkedIn, and Kaggle. GitHub is a platform used for hosting and managing code, where I created a profile README to showcase my academic background and interests. LinkedIn is a professional networking platform that helps in building connections and showcasing educational and career details. I updated my education section with my current degree and expected graduation year. Kaggle is a platform for data science and machine learning, where users can practice datasets and participate in competitions.
Over the next four years, I plan to actively use GitHub to upload my projects and improve my coding skills. I will use LinkedIn to build a professional network and explore career opportunities.
On Kaggle, I aim to enhance my knowledge in data science and participate in competitions.
These platforms will help me grow academically and professionally.

TASK-3 (PLATFORMS)

- For this project, I primarily utilized Python within a Windows environment, leveraging specialized libraries like NumPy to handle vector mathematics and data structures. To streamline the development process and ensure a user-friendly interface for my digital awareness initiative, I integrated Google Forms as the primary deployment platform for interactive assessment.
- Throughout this practice, I built a functional Shopping List application that prioritized file-based data persistence and logic flow. Furthermore, I developed a Digital Literacy Awareness Quiz designed to educate peers on critical security concepts like HTTPS encryption and phishing detection. These exercises allowed me to practice translating theoretical programming concepts into practical, everyday utilities.

TASK-4 (EMAIL – ETIQUETTE)

Poor digital communication can often lead to misunderstandings and serious problems. For example, a student once sent a short and unclear email to a professor regarding an assignment deadline, simply writing, “I can’t submit today.” The message lacked proper explanation, tone, and politeness, which made the professor perceive it as unprofessional and careless. As a result, the request was denied, and the student faced penalties.

This situation could have been handled better by writing a clear and respectful email, explaining the reason for the delay, and formally requesting an extension. Proper structure, polite language, and clarity are essential in digital communication. By following basic email etiquette, the student could have maintained professionalism and possibly received a positive response.

TASK-5 (CYBER CRIME)

- While researching cybercrime, I was most surprised by how easily people fall victim to phishing attacks despite being aware of online risks. The use of urgency and realistic-looking messages makes it difficult to distinguish between genuine and fake communication. I realized that even small mistakes, like clicking on an unknown link, can lead to serious consequences such as financial loss or identity theft.
- As a result, one habit I will personally change is being more cautious while checking emails and messages, especially those asking for sensitive information. I will make it a practice to verify links and sources before taking any action. This awareness will help me stay safer online and avoid becoming a victim of cybercrime.
